

# PRO PRESS SYSTEM

SOFT GEL TIPS THAT OFFER QUICK, STRONG AND BEAUTIFUL ENHANCEMENTS.

## REMOVAL GUIDE

- 1** Remove the length of the tips with a scissors or nail clipper.
- 2** Using an **E-FILE** or nail file remove the top coat and gel polish colour from the tips.
- 3** Soak the nails in Gel Off solution or soak a cotton pad in Gel Off solution and wrap the nails. Allow to soak for 10 minutes.  
After 10 minutes remove the nails one by one and push off the dissolved soft gel tip and adhesive with an orange wood stick.
- 4** The **PRO-PRESS** soft gel turns to a soft jelly like consistency when soaked. This is normal.
- 5** Once all of the Pro-Press tip and adhesive has been removed. Buff the natural nail with a Foam File and prepare for a new application.

## CAN I IN-FILL PRO-PRESS TIPS?

YES! You can choose to in-fill the Pro-Press tips when your client returns after 3 weeks if desired.

In-fills are done in the same way as you would normally do them with a hard gel or acrylic material.

1. File off the top coat and gel polish colour.
2. Prep the new nail growth as normal.
3. Ensure the Pro-Press tip has been filed flush to the new nail growth.
4. Using our Builder Gel, Acrylic, or Builder Base in-fill / re-balance the nails as required.
